

Join the Coalition to Support a Climate Asset Plan for California

Yes! We support the Climate Asset Plan (CAP) to reduce the global warming threat and transition California to a clean energy economy.

We agree with a comprehensive approach to reduce the threat of global warming that is based on the principles of fairness, efficiency, and effectiveness. We support a comprehensive plan that will:

- Significantly reduce global warming pollution to ecologically sustainable levels.
- Promote cleaner forms of energy through a market-based system of emission permits.
- Create an annual auction system for the sale of permits for the release of global warming pollution, with all proceeds going to administer the system and provide incentives for clean energy.
- Save California billions of dollars by reducing the public health and environmental costs associated with air pollution and climate change.
- Provide funding for energy efficiency and renewable energy to assist businesses and households in reducing energy bills.

Please add my organization to the supporter list and use our name as an endorser of the Climate Asset Plan for California.
